

## SPECIFIC PRODUCTS

### FEATURES AND BENEFITS

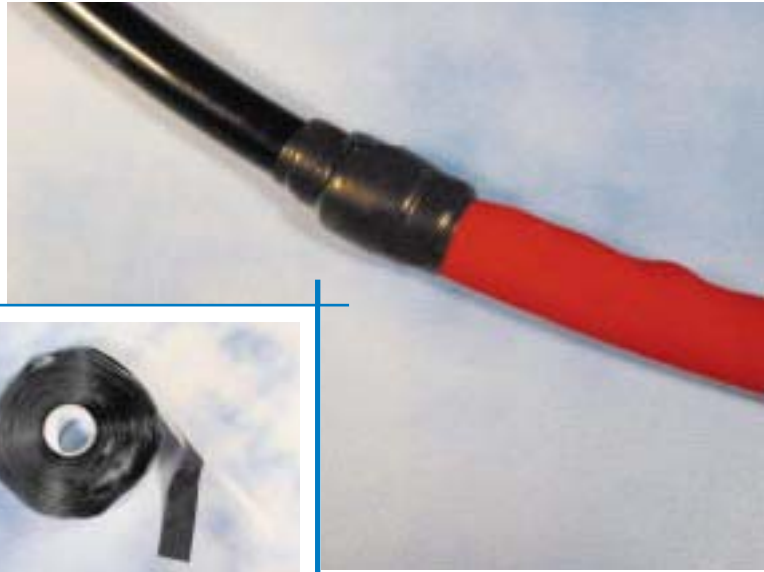

- Self amalgamating at ambient temperature
- Working temperature :  
-50°C +260°C

### TYPICAL APPLICATIONS

- Sealing & finishing of sleeve cut ends
- Wire harness
- Hose & tubing

# Self Amalgamating

## Tape 67N

Bentley-Harris® tape 67N is a very flexible elastomer tape which self amalgamates at ambient temperature.

**Silicone tape 67N** is used for sealing or finishing the sleeve cut ends exposed to high temperatures.

The surface of this tape sticks together if a light pressure is exerted. After several hours at ambient temperature the individual layers fuse.
